

Hello! I design with an ambition to create something **memorable, intuitive, and that evokes a feeling of “joy”**. I seek to create impactful experiences by **combining user-centric thinking with business needs**.

WORK EXPERIENCE

UX/UI Designer (Fixed-Term) - AAA Game

Blackbird Interactive | Apr 2026 - Sept 2026

Owned the design of foundational controller navigation for an unannounced Electronic Arts IP.

- Established UX for a new controller-based character customization experience, replacing unintuitive interactions. Facilitated playtesting through large-scale Figma controller prototypes spanning character customization and open-world menu navigation, defining test goals and scripts.
- Designed foundational controller navigation systems across multiple game modes, establishing rules for interaction behavior and HUD navigation. Proactively investigated cross-mode requirements beyond active production work, ensuring designs scaled consistently across the game while improving focus-state visibility and logic.
- Partnered with stakeholders, technical designers, and engineering to drive design decisions from concept through implementation. Identified cross-mode dependencies to inform production planning, introduced practices to accelerate design signoff, and secured stakeholder alignment while balancing player experience, technical feasibility, and timelines.

UX Designer II

Electronic Arts (EA) | May 2021 - Apr 2024

Shaped UX for major features across Frostbite editors, owned and grew the Frostbite Design System (FDS), and drove project management and cross-functional team facilitation.

- Led UX design for 30+ complex workflows, including Data Binding creation in UI and multi-generator workflows in Procedural Generation. Projects involved end-to-end UX processes (i.e. user research, wireframing, mockups, prototyping, testing, stakeholder buy-in, holistic impact reviews), project management, and game studio collaboration (e.g. EA Sports - FC, DICE, Full Circle).
- Directed an overhaul of defunct FDS documentation to a 60+ page library that increased onboarding speed of designers/engineers by 250%, improved design consistency, and drove FDS adoption.
- Grew FDS by adding design guidelines (e.g. color use, spacing), improving consistency across 50 components, and championing use of FDS in engineering teams and EA game studios.

UX/UI Designer

Sprung Studios Ltd. | Mar 2019 - May 2021

Delivered UX/UI for clients including Activision (Call of Duty: Vanguard), Amazon Games, and Pixelberry across AAA game and mobile storefront experiences.

- Designed the UX of Loadout Sharing, Clans, and Clan Wars in Vanguard, as well as UI console concepts of the in-game Store, Battle Pass, and Special Missions. Presented deliverables such as research, user flow charts, wireflows, and mockups weekly to the client (Activision Sledgehammer).
